

ATUG's 2008 Regional Communications RoadShow

"Communications Making a Difference" "How Do I Take Advantage of the Digital Economy?"

ATUG's vision is for regional Australian telecommunications users to have access to competitively priced, innovative, quality communication services that improve government services, community life and business outcomes.

ATUG have been working to achieve this vision since 2003 by building awareness of services and information available amongst regional users through our Regional Communications RoadShow, communicating and facilitating our findings of their needs to industry and government.

ATUG's 2008 RoadShow objectives include;

Identifying issues of interest to regional users of communications services through workshop discussions with relevant stakeholders

Informing and educating regional users and their representative organisations, about telecommunications issues, which may include (by way of example only) availability of services, applications of services, pricing, switching processes and service quality, e-security, complaint handling and escalation.

Representing the issues to the Government, regulators (the Australian Communications and Media Authority (ACMA) and the Australian Competition and Consumer Commission (ACCC) and self-regulatory bodies in telecommunications.

Fostering industry awareness of telecommunications issues of relevance to regional broadband users and ensuring government and industry policy developments reflect issues of interest to regional broadband users

If you are a local business, healthcare provider, resident, internet service provider, supplier of communications and communication equipment, local or state government representative and would like to know more about the developments and opportunities of converged communications, please join us at **ATUG's 2008 Regional Communications RoadShow.**
