

ATUG – 2005 Regional Conference - Canberra

Brian Beckor – Bio

Brian is the principal and founder of Callpoint, which has offered specialist technical and marketing advice to the telecommunications industry since 1993. In 2000, Brian began applying geospatial techniques to facilitate broadband service deployment and marketing.

This effort led to Callpoint's development of GeoCarrier®, a geospatial software application tailored to the needs of the telco industry. This stands on the strength of Brian's twenty-three years of industry experience. He commenced his career with OTC (now Telstra International). Over his dozen years there he fulfilled engineering, product development and marketing roles. Highlights included the launch and management of Skystream, a service that carried Australia's first Internet traffic. He also launched and managed Call Plan, Australia's first international voice VPN.

Brian is also active in industry development. He was nominated to ATUG's Broadband User Group in 2002, is a member of SPAN and ASIBA, the Australian Spatial Industry Business Association. He has consistently championed the more open sharing of Telstra exchange information so that geospatial techniques can benefit a wider user base.

Brian holds a Bachelor of Engineering from UNSW and an MBA from Macquarie University.
